Patent No. 5981838
GENERAL INFORMATION:
APPLICANT: Simpson, Christine Lynn
APPLICANT: Giffard, Philip Morrison
APPLICANT: Jacques, Nicholas Anthony
TITLE OF INVENTION: Genetic Manipulation of Plants to
TITLE OF INVENTION: Increase Stored Carbohydrates
NUMBER OF SEQUENCES: 2
CORRESPONDENCE ADDRESS:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  MEDIUM TYPE: Floppy disk

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The sequences (AAR43694-98) are subsequences from GT, they provoke T- and B-cell responses in mammals. The can be used to produce a vaccine comprising 2 of these sequences attached to a peptidyl core matrix. They are useful in producing T-cell responses to the GT enzyme causing a reduction of colonisation or accumulation of mutans steptococcal strains in mammals. The vaccines can be used in preventing dental caries. (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           8
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    glucosyltransferase in a mammal. The immune response results in reduction of the colonisation or accumulation of mutans streptococcal strains in the mammal. Compositions containing AAW34156 specifically interfere with the glucan-binding activity of the streptococcal glucosyltransferase. The peptides can also be used in vaccines for preventing dental caries in mammals. (Updated on 25-MAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                     AAW34156-W34160 represent immunogenic fragments of the Streptomyces mutans glucosyltransferase (GTF) enzyme. AAW34157 and AAW34158 are from the catalytic domain of GTF, while AAW34160 is from the GTF surface domain. AAW34156 and AAW34159 are from the glucan-binding domain of GTF. These sequences can all be used in the immunogenic composition of the invention. The composition of the invention can alternatively comprise one or more of these sequences linked to a lysine core matrix (see AAW34161-W34165). A composition comprising one of these sequences can be administered to a mammal to raise an immune response, in a method for interfering with the enzymatic activity of streptococcal
                                                                                                                                                                                                                                                         Immunogenic compositions containing streptococcal glucosyl:transferase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Glucosyltransferase; enzyme; vaccine; anticaries; epitope; immunogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Streptococcus mutans glucosyltransferase-B catalytic domain peptide.
                                                                                                                                                                                                                                                                                peptide(s) - used for provoking immune response to streptococcal glucosyl:transferase for preventing dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    .
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 22;

                                                                                                                                                                                                  The present sequence is that of a catalytic domain peptide fragment of Streptococcus mutans glucosyltransferase. The peptide can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions comprise a major histocompatibility complex (MHC) class I protein-binding peptide from Streptococcus mutants glucan binding proteinsubunit of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Displicipic or multiepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GbpB can be used in passive immunisation.
Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing mammals against dental caries.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Gaps

/label= GTF antigenic peptide #3 (see AAW34158)
/note= "attached to the dendritic polylysine core via the
alpha-amino group of Lys(23); a second copy of the
antigenic 22-mer is linked to Lys(23) via the omega amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  /note= "the alpha amino acid group of Ly8(24) forms a peptide linkage with the carboxyl amino group of Ly8(23); the omega amino group of Ly8(24) forms a peptide bond with a second Lys residue analogous to Ly8(23)"
The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MHC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB-derived peptide of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                            Glucosyltransferase; GTF; enzyme; immunogen; catalytic domain; vaccine; surface domain; glucan-binding domain; mutans streptococcal strain; immune response; glucan-binding activity; dental caries prevention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Anote= "Lys(23) is linked to one copy of the antigenic peptide through the alpha-amino group, and to a second copy of the peptide (not shown) via the omega amino
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Immunogenic compositions containing streptococcal glucosyl:transferase peptide(s) - used for provoking immune response to streptococcal glucosyl:transferase for preventing dental caries.

Claim 12; Col; 11pp; English

```
AAW3161-W34165 represent the Streptomyces mutans glycosyltransferase (GTF) enzyme immunogenic fragments shown in AAW34156-W34160 linked to a polylysine core. AAW34157 and AAW34158 are from the catalytic domain of GTF, while AAW34150 is from the GTF surface domain. AAW34156 and AAW34159 are from the glucan-binding domain of GTF. These sequences, and the immunogenic composition of the invention. A composition comprising one of these sequences can be administered to a mammal to raise an immune caponse, in a method for interfering with the enzymatic activity of streptococcal glucosyltransferase in a mammal. The immune response results in reduction of the colonisation or accumulation of mutans streptococcal strains in the mammal. Compositions containing AAW34156 specifically interfere with the glucan-binding activity of the categories for preventing dental caries in mammals. (Updated on 25-WAR-2003 to correct PF field.)
                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anti-caries agent composed of a monoclonal antibody against an inhibitory enzyme against water insoluble glucan synthetase of glucosyl transferase-B (GTF-B) of Streptococcus mutans.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus muthans, particularly mouse-hybridoma MHP126 (FERM P-1756) or mouse-hybridoma MHP136 (FERM P-1756), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Antibody; dental caries; water insoluble glucan synthetase; anti-caries; glucosyl transferase-B; immunotherapy.

The invention an isolated protein comprising a glucosyltransferase (GTF)

B polypeptide having changes at position from 1448V, D457N/D507K,

K1014T, D457N/D567TK/D571K, D567T/D571K, D567T,

K1014T, D457N/D567TK/D571K/K779Q/K1014T, Y168A/Y170A/Y171A, and K779Q or a care a glucian produced by the GTF D polypeptide having changes at positions from T589D, T589E, N471D,

K471D/T589D, and N471D/T589E, Also included are a glucian produced by the GTF mutant, an isolated polymucleotide which encodes Pl or P2, or its complementary polynucleotide, a ribonucleic acid sequence encoding the CTF mutant, an expression cassette comprising the polynucleotide operably linked to a promoter, a vector comprising the expression cassette, host cell introduced with the vector, a transgenic plant comprising the comprising the comprising the comprising and/or cating composition comprising a glucan produced in a plant transformed with a gene encoding the mutant GTF, wild type or, starch, a latex, the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a communication or mutant and a paper.
                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            comprising the glucan (paper sizing/coating agent). The vector is useful

The invention relates to a monoclonal antibody against dental caries and an anti-caries agent composed of a monoclonal antibody produced by Streptococcus mutans, particularly mouse-hybridoma MHP126 (FERM P-17566) or mouse-hybridoma MHP136 (FERM P-17567), against an enzyme having inhibitive activity against water insoluble glucan synthetase of glucosyl transferase-B. The monoclonal antibody specifically inhibits water insoluble glucan synthetase of Streptococcus mutans produced glucosyl transferase-B and is used in the immunotherapy of dental caries. This sequence represents a Streptococcus mutans monoclonal antibody-related

Sequence 1375 AA;

protein

Anti-caries agent composed of a monoclonal antibody against an inhibitory enzyme against water insoluble glucan synthetase of glucosyl transferase-B (GTF-B) of Streptococcus mutans.

for producing a glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from ribulose biphosphate carboxylase small subunit, waxy, brittle-1 and chlorophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amylophate of poctato or the vacuole of sugar beet. Glucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and convironmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents GTFC
                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Antibody; dental caries; water insoluble glucan synthetase; anti-caries;

The invention relates to a composition comprising a fragment of a glucan binding protein-B (GbpB) and a biocompatible microparticle, where the fragment binds to a major histocompatibility complex (MRIC) class II protein. The composition is useful for producing an antibody for immunizing mammals against dental caries. This sequence corresponds to a Streptococcus mutans GbpB protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New composition comprising a fragment of a glucan binding protein-B (GbpB) that binds to MHC class II protein, and a biocompatible microparticle, useful for producing an antibody (claimed) for immunizing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Glucosyltransferase, GTFB; transgenic plant; paper sizing; coating composition; glucan; starch; latex; thermoplastic molecule; amyloplast; vacuole; paper manufacture; mutant; mutein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ó
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is the protein sequence of Streptococcus mutans glucosyltransferase-C (GTF-C). Peptide fragments of GTF-C, especially from the catalytic domain of the polypeptide, can be used in immunogenic compositions and subunit vaccines for dental caries. These compositions binding peptide from S. mutants glucan binding protein-B (GppB) covalently linked with a peptide fragment of a streptococcal glucosyltransferase. The compositions are used in a claimed method of eliciting production of an antibody in a mammal. Dispitopic or mutliepitopic polypeptides can be prepared synthetically or by recombinant DNA technology. Antibodies raised against MHC class II binding fragments of GpbB can be used in passive immunisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Composition useful as vaccines for dental caries comprises a fragment of a glucan binding protein-B binding to a major histocompatibility complex class II protein.

Claim 36; Page; 44pp; English

require input materials that produce chemical effluents, paper manufacture utilising the glucan produced by GTF, which utilises biologically produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present sequence represents a GTFB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the GTFB sequence as Pacification as AAU98027 and the information in

Sequence 1475 AA;

The invention an isolated protein comprising a glucosyltransferase (GTF) B polypeptide having changes at position from 1448V, D457N/D557T, MIGHAT, D457N/D567T, D571K, D567T/D571K, D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K1014T, I448V/D457N/D567T/D571K/K779G/K1014T, I648V/D457N/D67T/D571K/K779G/K1014T, I648V/D567T/D571K/K779G/K1014T, I648V/D567T/D571K/K779G/K1014T, I648V/D567T/D589E, N471D/T589E, N471D/T589E, Also included are a glucan produced by the GTF mutant, an isolated polynucleotide which encodes Pl or P2, or isomplementary polynucleotide, a ribonucleic acid sequence encoding the GTF mutant, an expression cassette comprising the expression cassette, host cell introduced with the vector, a transgenic plant, a paper sizing and/or vector, a seed or tuber from the transgenic plant, a paper sizing and/or

coating composition comprising a glucan produced in a plant transformed

Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions.

Glucosyltransferase B or D protein useful for producing a glucan useful as substitutes for and additions to modified starch and latexes in paper manufacture, comprises mutations in specific positions.

WPI; 2002-414332/44.

Nichols SE;

```
the a gene encoding the mutant GTF, wild type or, starch, a latex, thermoplastic molecule or their combinations or glucoan and starch where the glucan is produced in the amyloplast and/or vacuole or a maize line deficient in starch biosynthesis, transformed with a gene encoding a comprising the glucan (paper sizing/coating agent and apper comprising the glucan in a plant. The method comprises transforming a plant cell with the vector, growing the plant cell under plant growing conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the conditions to produce a regenerated plant and inducing expression of the polymucleotide for a time sufficient to produce the glucan in the regenerated plant, where the vector contains a transit sequence from comprophyll AB binding protein to produce a transgenic plant, and glucan is produced in the amyloplast of potato or the vacuole of sugar beet. C dlucans are useful as substitutes for and additions to modified starch and latexes in paper manufacture. Unlike prior art techniques, which cequire input materials that produce chemical effluents, paper comparation in produced input materials, is more cost-effective and environmentally friendly. Moreover, glucans also exhibit thermoplastic properties and impart gloss to the paper during coating step. The present c sequence represents a GTPB mutant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer claim 36

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            A,Gene: cgt

Cpunction:

A,Description: catalyzes the breaking and reformation of 1,4-alpha-D-glucopyranosyl bond

A,Note: can also catalyze the disproportionation transfer of 6 to 8 1,4-alpha-D-glucopyr

C,Superfamily: cyclomaltodextrin glucanotransferase/alpha-amylase; alpha-amylase core ho

C,Superfamily: cyclomaltodextrin glucanotransferase/alpha-amylase; hexosyltra

F,13-1655/Product: cyclomaltodextrin glucanotransferase #status experimental <MAT>

F,31-1657/Product: cyclomaltodextrin glucanotransferase #status experimental <MAT>

F,321-66/Domain: B < DOB>

F,221-366/Domain: alpha-amylase core homology <AMY>
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   nucl
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      A,Cross-references: UNIPROT.P08704, UNIPARC:UPI0000127416, EMBL:M15264, NID:g149178, PID

R -> K (in strain MT4245, strain MT4251, strain MT4467 and strain MT8148).

A -> T (in strain GS-5).

M -> T (in strain MT8148).

A -> V (in strain MT8148).

L -> F (in strain MT4239).

N -> Y (in strain MT4239).

A -> T (in strain MT4239).

I -> V (in strain MT4239).

I -> V (in strain MT4239).

I -> V (in strain MT4239).

I -> V (in strain MT4239).

I -> V (in strain MT4239).
aggregation of bacterial cells and food debris.

CATALYTIC ACTIVITY: Sucrose + (1,6-alpha-D-glucosyl)(n) = D-fructose + (1,6-alpha-D-glucosyl)(n+1).

SUBCELLULAR LOCATION: Secreted.

MISCELLAURANEOUS: GTF-I synthesizes water-insoluble glucans (alpha 1,3-linked glucose and some 1,6 linkages), GTF-S synthesizes

water-soluble glucans (alpha 1,6-glucose). GTF-SI synthesizes both
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                InterPro; IPR002479; Cell_wall_bd_put.

This Swiss-Prot entry is copyright. It is produced through a collaboration between the Swiss Institute of Bioinformatics and the EMBL outstation the European Bioinformatics Institute. There are no restrictions on its use as long as its content is in no way modified and this statement is not
their ability to adhere to smooth surfaces and mediate the aggregation of bacterial cells and food debris.
CATALYTIC ACTIVITY: Sucrose + (1,6-alpha-D-glucosyl) (n) = D-fructose + (1,6-alpha-D-glucosyl) (n+1).
SUBCELLULAR LOCATION: Secreted.
MISCELLANEOUS: GTF-I synthesizes water-insoluble glucans (alpha MISCELLANEOUS GTF-I synthesizes water-soluble glucans (alpha 1,6-glucose). GTF-SI synthesizes water-soluble glucans (alpha 1,6-glucose). GTF-SI synthesizes both forms of glucans.
SIMILARITY: Belongs to the glycosyl hydrolase 70 family.
SIMILARITY: Contains 10 cell wall binding repeats.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Garalytic (approximate).
Caralytic (approximate).
Glucan-binding (approximate).
S x tandem repeats.

-!- FUNCTION: Production of extracellular glucans, that are thought to play a key role in the development of the dental plaque because of their ability to adhere to smooth surfaces and mediate the aggregation of bacterial cells and food debris.

-!- CATALYTIC ACTIVITY: Sucrose + (1,6-alpha-D-glucosyl) (n) = D-fructose + (1,6-alpha-D-glucosyl) (n+1).

-!- SUBCELLULAR LOCATION: Secreted.
-!- SUBCELLULAR LOCATION: Secreted.

GENERAL INFORMATION:

APPLICANT: VAN GEEL-SCHUTTEN, GERRITDINA HENDRIKA

APPLICANT: DIJKHUIZEN, LUBBERT

APPLICANT: RAIROUI, HAKIN

APPLICANT: LEER, ROBERT-JAN

TITLE OF INVENTION: NOVEL GLUCOSYLTRANSFERASE AND NOVEL GLUCAN

FILE REFERENCE: BO 43388

CURRENT FILING DATE: 2000-06-28

PRIOR APPLICATION NUMBER: 0200-06-28

PRIOR PELING DATE: 2000-05-25

PRIOR FILING DATE: 2000-05-25
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Ouery Match 87.5%; Score 91; DB 2; Length 2057; Best Local Similarity 85.7%; Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
